Abdos Group is an expanded conglomerate established in 1967, with diverse business divisions covering packaging, FMCG, distribution, contract manufacturing and life sciences. Over the years, we have consorted with leading companies like TATA, Hindustan Unilever, and ELIDA, fostering meaningful relationships built on trust and shared growth. This year, we have marked another major milestone with the installation of our manufacturing facility in Egypt, which is dedicated to FMCG contract manufacturing. This facility has a capacity of over 50,000 tonnes and the ability to produce more than 250+ SKUs across the personal care range. This strategic expansion enables us to serve the markets across North America, Europe, the Middle East, and Africa.

In 2010, the Life Sciences division of Abdos began, with global headquarters located in New Delhi, a manufacturing and distribution facility in Roorkee, India, a sales office in Kolkata, and a logistics subsidiary in Venlo, Netherlands. We ensure seamless service and product supply to customers across more than 90 countries worldwide.

The recent years have been crucial for Abdos Life Sciences as we believe in innovating, expanding, and serving supreme value to our customers. This is our 11th edition of the product catalogue with a diverse range of new products added which are designed to meet diverse laboratory needs, including Western Blot (Compact Blot), contact plates, large-capacity centrifuge tubes, bottle safety carriers, self-manufacturing desiccators, the Ampclear PCR range, compact PAGE mini-moulded vertical electrophoresis, the widest range of deep well plates, and Erlenmeyer flasks. These new advancements show up our commitment to precision, quality and innovation across our portfolio.

Abdos remains dedicated to continuing significant global presence. In 2024, we actively engaged in over 40+ roadshows across India and participated in prestigious events such as the CPHI Conference (New Delhi) and India Lab Expo (Hyderabad). We showcased our innovations at globally recognized trade fairs, including Medica (Dusseldorf), Analytica (Munich and Shanghai) and Arab lab (Dubai). We hosted an exciting channel meet in Vietnam to strengthen the collaboration with partners and distributors to share their insights on recent market trends and explore our latest product innovations. We are available on several social media channels, including LinkedIn, Facebook and website www.abdoslifesciences.com. All these platforms serve as vital hubs for product knowledge, technical support, and latest updates on industry trends.

Innovation remains to be at the heart of everything we do. Abdos innovative offerings includes Elegant Pipettes, one of the world's lightest pipettes globally, and the Biofill<sup>™</sup> Vacuum Filtration System reflect our drive to develop user-friendly and high-performance equipment. In the area of accreditations, we are the first in Asia to set a benchmark for quality by obtaining certifications for IVD, IVDR, UKCA, ISO 14001, and ISO 18385. These certifications are a testament to the high-quality products and plant infrastructure at Abdos life sciences.

#### SWIRL MICRO PLATE CENTRIFUGE

- Less than half the size of conventional centrifuge (9 x 10 inches).
- The easily reachable rotor chamber includes two plate carriers that rest at a 75° angle, thus allowing plates to be inserted confidently without seal in tapes or caps.
- Upon closing the lid of the centrifuge, the rotor accelerates and the centrifugal force swings the plates into a horizontal position. Any droplets on the walls of the plate quickly concentrate into the well bottoms.
- With a G-force of 600 xg, most samples can be spun.
- Just open the lid and the automatic electric brake brings the rotor to a quick & smooth stop in just 4.0 seconds.

## LAST DROP<sup>™</sup> Low Retention Pipette Tips

The Retention level is 10 times lesser with viscous samples than standard pipette tips.

Super homogenous surface free sites prevent non-specific binding.

DNase, RNase and Pyrogen free.

Tips are also free from Bacteriostatic & Fungistatic property that gives tips a unique feature to work in microbiological lab.

Optimal surface for enhanced dispensing behaviour & minimal sample loss of highly viscous liquids or samples containing detergents.

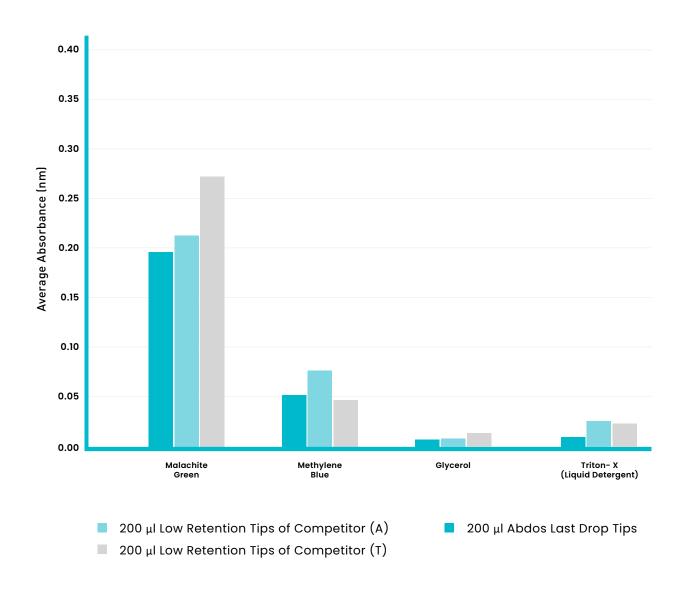

The use of the latest injection moulding process produce high precision, thin wall tips with high clarity for better visibility of sample.

Reduce Sample retention for precision & to save on costly reagents.

All tips are manufactured from ultrapure USP Class VI certified, Virgin PP (Polypropylene) to ensure the highest quality. Free from heavy metals, natural rubber and inhibitory plasticizers.

#### **MATERIAL & METHOD**

- 200µl Last Drop pipette tips were compared with other low retention tips in combination with an electronic pipette, were used to aspirate & dispense 100µl of Malachite Green, Methylene Blue, Glycerol & Triton-X (liquid detergent) at a constant pipetting speed.
- Residual in the pipette were washed out by repeated rinsing with 200µl water into cuvette and compared photometrically. The average values established are shown in the table.

**COMPARISON CHART** 

Result: Abdos Last Drop Pipette Tips clearly reduce sample loss. As seen above in the graph, it clearly indicates that Abdos Tips retained least amount of residue and saves on costly reagents.

## **SUPER Filter Tips**

Best Suited for Biological application.

Abdos Filter is 100% pure porous PE. It makes Recovery of Samples from Wetted, Filtered without Contamination.

Non Cytotoxic (ISO 10993-5 MRM, Minimal Essential Media Elution, GLP Compliant). 99.9% Bacterial Aerosol Filtration Efficiency (BFE), (ASTM F21012).

Non Hemolytic (Modified ASTM F 756-08 Hemolysis Direct Contact GLP with Human Blood).

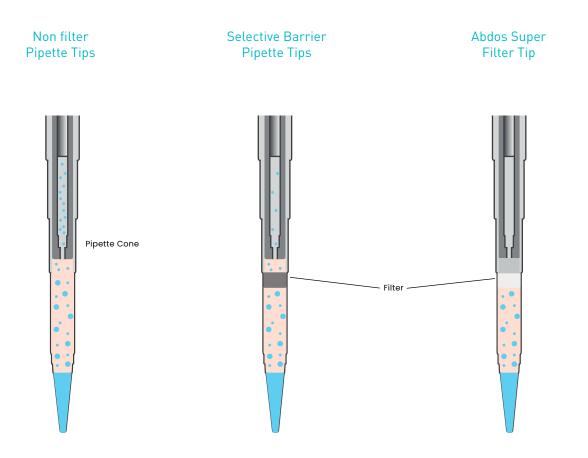

Inert, Hydrophobic Filter does not trap or block the liquid.

#### ABDOS SUPER FILTER PREVENTS BOTH LIQUID & AEROSOL PASSING THROUGH THE FILTER

Case Study:

Contamination is one of the major issue we faced while working in our labs. Majorly contamination is been carried out while pipetting the samples from one source to the other; therefore Abdos offers Super filter that prevents both Liquid & Aerosol passing through the filter, thus making pipette shaft contamination free.

May lead to contamination of Most filter pipette tips do not act as a can be contaminated.

the pipette as there is no barrier barrier to both liquid and Aerosol. The for Liquid or Aerosol to prevent Pores of the filter act as a selective entering into the shaft. Thus can barrier thereby contaminating the affect the experiment & samples pipette. While in other filter pipette tips, the liquid touches the filter, the filter becomes wet and locks. Hence, possibility of sample recovery is not possible.

Abdos Super filter prevents Aerosol passing through & aqueous liquid by-pass prevention in over-pipetting. Thus makes it unique in preventing the contamination.

Proprietary Pure Porous Hydrophobic PE filter helps us to recover contamination free samples from wetted filter and does not trap or block the liquid into the filter.

#### Application Area: Neutralization assays

Perfect tips for easy dispensing and visible volume measurements, fits in almost all the pipettes, and multichannel. I have used these tips in multichannel pipettes, for doing high-throughput assays, it was relatively easier to remove/insert tips when you continuously do a rigorous amount of work, thus, doesn't hart my hands, and saves time, fits properly.

Great product with further recommendation to other people who haven't tried yet.

Application Area: Cell culture experiment

"The product is of good quality and easy to use. The dimension and size of the plate fits fine (90 mm) for everyday use in cell culture experiment. The lid and bottom part is perfectly fit and requires less media to carry on your experiment. It is a nice product that has proper air space and has less contamination property. It also produce less fogginess which happens due to growing cells in the plate, as compared to other petri clishes, which properly enables us to observe the growing cells clearly under microscope. Thus, considering all the positivity, it is one in all (with good qualities) product item. Thanks to ABDOS."

#### Good product, highly moisture resistant, recommended

★ ★ ★ ★ Average Rating 5.0

Application Area: To protect the samples from humidity

The desiccator we used from Abdos is very rugged, easy to use and protects hygroscopic chemicals from humidity very efficiently which was essentially required for our samples. The cost is also reasonable for laboratory usage.

#### SWIRLEX - MICROPLATE MIXER

- SWIRLEX Microplate Mixer is used for holding single or double micro plates with an SBS footprint.
- This is widely used in life sciences including microbiology, cell and molecular biology, immunology and biotechnology for various mixing applications with optional adapters.
- The high speed and small diameter combine to offer a true vortexing action in each well of the micro plate. This action ensures both complete and uniform mixing.

#### Sterilization

 Autoclaving (121°C, 15 psi for 20 minutes) Clean and rinse item with distilled water before autoclaving. Certain chemicals which have no appreciable effect on resins at room temperature may cause deterioration at autoclaving temperatures.

ALWAYS COMPLETELY DISENGAGE THREADS BEFORE AUTOCLAVING.

• Gas - Ethylane oxide, formaldehyde.

#### Chemical Resistance for ABDOS Labware

Dry Heat - 106°C for 120 minutes.

- Disinfection Benzalkonium chloride, Formalin, Ethanol, etc.
- Radiation Gamma irradiated at 2.5 Mard with unstabilized plastic.
- + Sterilizing reduces mechanical strength. Do not use PC vessels for vacuum application if they have been autoclaved.

#### **Chemical Resistance Classification**

E = Excellent - 30 Days of constant exposure cause no damage. Plastics may even tolerate for years.

G = Good - Little or no damage after 30 Days of constant exposure to the reagent.

F = Fair - Some effect after 7 days of constant exposure to the reagent, like cracking, loss of strength or discoloration.

N = Not Recommended - Not for continuous use. Immediate damage may occur.

- G = Continuous exposure for 7 30 days to media and solvents causes minor damageto the product. (e.g. swelling, softening, mechanical strength, discolouration).
- F= Not Suitable for continuous exposure to media and solvents. May damage the product. (e.g. deformation, cracking, liquification).

The above Chemical resistance chart is meant to be used as a guide only. As temperature, exposure time and functional conditions affect resistance and can vary for each application, Abdos highly recommends users to evaluate products under their own conditions prior to use. Abdos does not warrant (neither expressed or implied) that the information in this chart is accurate or that any material is suitable for any purpose.

### **FUNDAMENTAL FACTS**

#### WHAT IS GAMMA RADIATION?

Gamma rays are a form of electromagnetic radiation-like x-rays, but with higher energy. The primary industrial sources of gamma rays are radionuclide elements such as Cobalt 60, which emit gamma rays during radioactive decay. Gamma rays pass readily through plastics and kill bacteria by breaking the covalent bonds of bacterial DNA. They are measured in units called kiloGrays (kGy).

Gamma irradiation provides a number of benefits in cost and sterility assurance. It can be applied under safe, well-defined, and controlled operating parameters, and is not a heat or moisture generating process. Consequently, there is no heat stress and condensate drainage or outgassing is not required. Most importantly, there is no residual radioactivity after irradiation.

#### DOSE VALIDATION

Gamma Radiation dose is validated according to IS. EN. ISO 11137-2 Method 1 to confirm the SAL  $10^{-6}$ 

For that routine testing of bioburden & Sterility test carried out at our manufacturing facility.

#### VALIDITY OF STERILITY

We assure all sterile products have been sterile through Co-60 gamma radiation with valid certified dose and has been PASSED for all sterility tests. We confirm that the Sterile product would be Sterile until unless the packing pouch is not tampered/punctured/open or 3 yrs from date of Radiation.

## SUITABILITY OF ABDOS PLASTICS FOR FOODSTUFF

The phthalates for which opinions have been given by EFSA (Europeann Food Safety Authority and TDI's (Tolerable Daily Intake) established for use in plastics for containers in food application, are not intentionally added in the manufacture of or the formulation of this product. The phthalates are di-isononly phthalate (DINP), DI-(2-ethylhexyl) phthalate (DEHP), di-n-butyl phthalate (DBP), di-iso-decyl phthalate (DIDP), butylbenzyl phthalate (BBP). In addition, di-iso-butyl phthalate (DIBP) has recently been classified by TC C&L of ECB (Commission Working Group on Classification & Labeling – European Chemicals Bureau) in accordance with the requirements of Directive 67/548/EC (Classification and labeling of dangerous substance), taking into account a NOAEL, the toxicity of DIBP is more than 100 times lower than DNBP's ( product assessed by EFSA for use in plastics in contact with food). Phthalates are not used in the manufacture of or the formulation of any Abdos manufactured products.

Abdos manufactured products have passed the USP tests for a Class VI, physio-chemical testing and meets USP limits.

Abdos manufactured products are made from the base resin which meets the FDA requirements contained in the Code of Federal Regulation in 21 CFR 177. 1520 (a)(3)(i) and (c)3. 1a. 3. 2a. All other ingredients meet the requirements of their respective FDA regulations and 21 CFR 177.1520(b). All Abdos manufactured products meet the FDA criteria in 21 CFR 177.1520 for food contact applications, including cooking.

#### **AUTOCLAVE GUIDE LINE**

To ensure successful steam sterilization of your plastic labware please adhere to the following guideline: Autoclave all plastic consumables at 121°C for 20 minutes, 15psi/1 atm. Do not use a dry cycle as this may cause deformation or weakening of the plastic. Allow temperature within the autoclave to return to at least 80°C before removing product. Autoclaving (steam sterilisation) is defined as the destruction or irreversible inactivation of all reproducible microorganisms under exposure to "saturated steam at a minimum of 120 °C." (DIN 58946-1, 1987). DIN EN 285 specifies a minimum exposure time (te) of 20 minutes (killing time and safety margin) at a sterilisation temperature of 121 °C. For the correct sterilisation procedure, including biological safety (DIN EN285), please contact your hygiene specialist.

Prior to autoclaving plastic labware, ensure that no soiling or residual contamination remains on the equipment. Otherwise, the residual contamination will bake on solidly during the autoclaving process.

Even substances that have no effect on the plastic at room temperature can still lead to destruction of the plastic during the autoclaving process. Additionally, microorganisms might not be killed effectively if they are protected by the residual contamination.

#### NOTES ON AUTOCLAVING

- Containers with screw tops or stoppers must be open during autoclaving to allow for pressure equalisation.
- Autoclaving of a closed container will lead to the deformation or destruction of the container.
- Plastic labware should be stood upright on a level surface during autoclaving to avoid shape deformation.
- Plastic labware should not be laid on its side during autoclaving.
- No mechanical stresses should be present during autoclaving.
- For example, do not stack items.
- Do not autoclave any container that contains residual contamination
   or even rinsing agent.
- Not all plastics are resistant to steam sterilisation! For example, polycarbonate loses its tensile strength.
- Mind the temperature limits for the plastics.
- Autoclavable products are identified with a "121 °C" symbol in this catalogue.

The surfaces of some plastics can be attacked by chemicals present during autoclaving, which can cause persistent clouding. Some transparent plastics can absorb minute quantities of steam, which can lead to reversible clouding. This clouding disappears upon drying, which can be accelerated through the use of a drying oven.

#### **RPM VS. RCF "WHAT'S THE DIFFERENCE?"**

**RPM** – stands for "Revolutions Per Minute" and is the speed that your rotor spins in your centrifuge.

RPM is specific to individual centrifuge brands and rotor sizes.

RCF – stands for "Relative Centrifugal Force" and is better known as g-force. This indicates the actual force resulting from the spinning action in the centrifuge.

It is g-force that drives sample separation.

The following equation can be used to convert RPM to RCF for any model centrifuge.

RCF = 0.00001118 x radius of rotation (cm) x RPM2

Note: radius of rotation is given by the distance of the furthest most point of the tube from the axis of rotation. Please refer to your centrifuge user guide for radius value.

#### **PROCEDURE:**

Procedure is to provide guidelines for ATP FREE Test (by Glucose Oxidase/ ATP Method). Glucose is a widely distributed simple sugar with an active aldehyde group. Estimation of glucose by glucose oxidase gives the true glucose concentrations eliminating the interference by other reducing sugars.

#### **PRINCIPLE:**

Glucose oxidase catalyses the oxidation of alpha-D-glucose to D-glucono-1, 5 lactone (gluconicacid) with the formation of hydrogen peroxide. The oxygen liberated from hydrogen peroxide by peroxide reacts with the O-dianisidine & oxidizes it to a red chromophore product. Read the colour intensity at 540 through UV Spectrophotometer or at 450 through ELISA.

#### Glucose + O<sub>2</sub>

Glucose Oxidase -> H2O2+ Gluconic Acid H2O2+O-dianisidine Peroxidase -> Red colour product

#### **CONCLUSIONS:**

The tested products are free from ATP detectable contamination (<1.0fg).

#### **PROCEDURE:**

Nucleic Acid (DNA) extraction and measurement were done by the procedures of Zachleder (50) as applied by Danovaro et al. (9) and Danovaro(10), with a few modifications to enhance DNA extraction from the sediment. Briefly, 1g of sediment (three replicates) was treated with 3.0 ml of 0.5N Perchloric acid, stirred for 3min & sonicated three times for 1min (with intervals of 30 sec). Nucleic acid extraction was carried out 75 °C for 30min under continuous stirring on water bath. After centrifugation (3000 rpm, 10min), the absorbance of the Total Nucelic Acid (TNA) in the supernatant was measured at 260 nm. For RNA take absorbance on 230 nm & for protein on 280 nm.

#### **CONCLUSIONS:**

The tested products are free from Human DNA detectable contamination(<0.5 pg/microliter).
